

Harmony Endpoint and Browser Data Loss Prevention (DLP)

Protect Data, Automate Compliance,
Increase Productivity

In any successful organization, data is exchanged constantly between customers, vendors, and partners through various types of devices. With the introduction of Generative AI tools to increase productivity, data is shared at a higher rate than ever.

Data Loss, whether accidentally by employees or intentionally by hackers, can result in the loss of intellectual property, customer and employee data and can cause both financial and reputational damage to your organization.

Boosting productivity without losing data

Check Point Harmony Data Loss Protection (DLP) offers comprehensive visibility into data movements within your organization, empowering you to establish security policies that automatically enforce your guidelines. This ensures organizational safety and compliance while maintaining employee productivity.

Protect Data, Remain Productive

Allow application use
without worrying
about data leakage

Prevent Data Loss

Protect your organization
from financial and brand
damage due to data loss

Maintaining Compliance

Automate
compliance with
data regulations

Complete Consolidation

Single security
platform, means a
reduced TCO

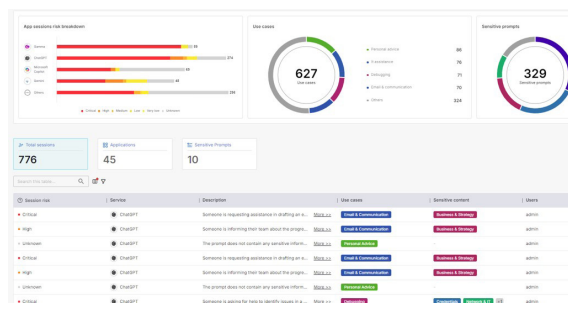

Harmony Data Loss Protection is designed to prevent loss of valuable information with ease through our browser-based DLP solution, protecting all your endpoints in a simple and powerful way, tailored for the digital workspace.

Gen AI Protect*

Our solution empowers safe use of GenAI tools while protecting your organization's assets. It prevents sensitive data submission, blocks copy-pasting of confidential information, provides usage insights, and enables customized policies. With AI-powered classification, we address privacy concerns and safeguard intellectual property in GenAI applications.

Consolidated Data Loss Prevention to keep your organization safe and productive

Safe Use of GenAI Platforms

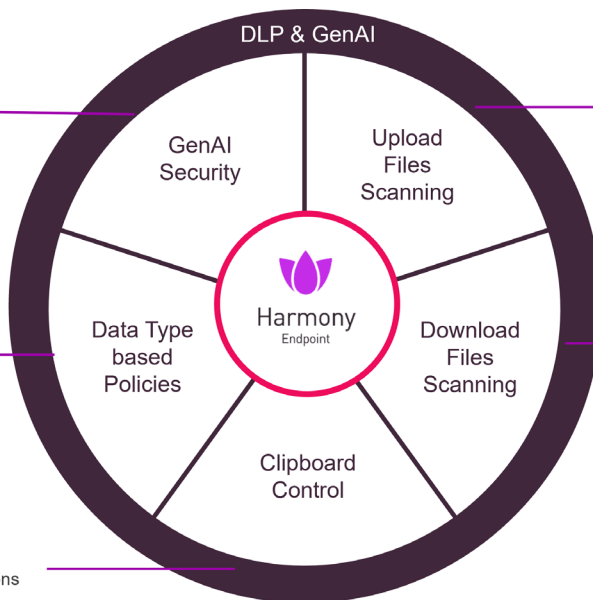

- AI Based Classification, to allow restrictions on unstructured data
- App Inventory for usage tracking
- Risk Insights based on end users' behavior

Multiple Data Types Restrictions

Multiple options to data type setting, including 700+ predefined data types, custom data types, and data type grouping

Clipboard restrictions

- Copy-Paste restrictions
- Print Restrictions

Policy based upload scanning

File upload will only be permitted if it meets policy restrictions

Policy based download scanning

File download will only be permitted if it meets policy restrictions

Part of the Harmony for Workspace Security Suite

Harmony helps organizations of all sizes to secure their workspaces. Harmony is a suite of products built to work together to protect the organization's network, data, users and devices. With AI powered security that is consolidated across all devices, web applications and network access, this cloud delivered suite of security solutions scales up for any size business. It is simple to manage, with the significant cost savings that come with buying a set of security solutions from a single vendor and managed within a single portal.
